Java Plugin Google Chrome v42

Chrome version 42 disables the plugin architecture used by Java and other common plugins. Banner will not function in Chrome v42 until the procedure below is performed.

---

**Step by Step guide**

**Enabling NPAPI in Chrome Version 42 and later**

As of Chrome Version 42, an additional configuration step is required to continue using NPAPI plugins.

1. In your URL bar, enter: `chrome://flags/#enable-npapi`
2. Click the **Enable** link for the **Enable NPAPI** configuration option.
3. Click the **Relaunch** button that now appears at the bottom of the configuration page.

Developers and System administrators looking for alternative ways to support users of Chrome should see this blog, in particular “Running Web Start applications outside of a browser” and “Additional Deployment Options” section.
