Disable Network: Macintosh

For both a wired or wireless network, if you need to disable networking on a Macintosh, follow these instructions

Step-by-step guide

1. Open System Preferences
2. Select Network
3. Select Wi-Fi
4. Click the minus symbol at the bottom of the chart ( - )
5. A prompt will appear, select the option to “Remove”
6. Select the “Apply” button.
7. Select Ethernet and repeat steps 4-6
8. If any other connections are available, proceed with steps 4-6 until there are no network options available

Close System Preferences
