MobLab: Instructors - Creating Classes

Summary

MobLab brings games to life in the classroom, allowing students to experience games and markets – helping them to develop a deeper understanding and to bring new energy to the course. Use this article to learn how to add classes in MobLab.

Step-by-step guide

Creating a class

1. Create a new class by clicking the + button next to Classes or clicking on the menu icon and selecting New Class.
2. A dialog box will appear where you can name your class and select what type of payment option is most suitable for your class. Finally, if you or your department has covered the cost of MobLab for your students, select that you Have a Code and enter your license code in the text box.
3. Press the Create button and you will be set! Upon creating a new class, we automatically add your first playlist. You can change the name of your playlist to match your lesson or add new playlists yourself.

Ask your students to join your class using the newly created Class Code.
