MFA: Logging in via VPN

Summary
Multi-factor Authentication (MFA) is an additional security measure to protect your intellectual property, personal information, and Yale's data. MFA adds a step to the log-in process used to access some of Yale's resources by requiring an individual, after entering their NetID and password, to prove their identity by responding to a prompt on a mobile device, landline, tablet or token. Use this article to find a Word Document with instructions for logging into VPN with Multi-factor Authentication.

Step-by-step guide
To learn more about Multi-factor Authentication:

1. Open and read this article: Logging into VPN with Multi-factor Authentication (DOC)
