Scholarship database management

The scholarship database has been moved and is now managed in Salesforce. The following is some basic information about the scholarship database

Information

The Scholarship database is owned and managed by Admissions (currently Valerie Cardona is the service owner).

The data is stored and managed in Salesforce, and the data is pulled by an API and displayed on the som web site.

Troubleshooting note: If new data is added or keywords added and are not visible on the website, it is possible the cache needs to be cleared on the website in order to pull a new set of data from Salesforce.
