Adding Second Outlook Profile, Outlook for Mac

This will guide you through adding a 2nd profile on Outlook for Mac

This won't prompt every time Outlook opens, you would have to launch the Profile Manager and switch the default account every time you want to go into the other account

Open Applications folder, Right click on Outlook and click Show Package Contents

Once in the next folder, click on Contents, and Shared Support and open Outlook Profile Manager

Click on the + icon to add a new profile
You can right click on the account you create and choose to set it as default.

You can also keep the Profile Manager in the dock so it's easier to launch and switch between profiles.

When switching profiles, be sure to always quit out of Outlook otherwise the changes won't happen.
