Disabling Mobile Navigation in WordPress

Mobile navigation is part of the standard setup of a WordPress site. This is turned on and enabled by default.

Information

If you would like the left navigation menus disabled, which are used for mobile devices navigation, you should contact somit@yale.edu and request that this feature be disabled. SOM IT Development group will provide support for these types of requests, specifically for Faculty Web pages. Ex. "faculty.som.yale.edu/facultyname."

Mobile Navigation is enabled by default because a growing number of readers primarily use mobile devices such as tablets in their day-to-day work.
